Ordnance Survey MasterMap

This is an aerial photograph of a residential area, likely in the UK, overlaid with Ordnance Survey MasterMap data. The map shows a dense cluster of buildings, roads, and green spaces. Several areas are highlighted with colored overlays: red, pink, blue, green, and yellow. These overlays likely represent different land use categories or planning designations. The map is oriented with North at the top. The text 'Ordnance Survey MasterMap' is displayed in the top left corner.

3. Visualising future landscape change

- Drawing on techniques from Landscape and Visual Impact Assessment (LVIA)

<https://www.landscapeinstitute.org/technical/glvia3-panel/>

<https://www.woodlandtrust.org.uk/press-centre/2019/05/ash-dieback-predicted-to-cost-15-billion/>

https://www.forestresearch.gov.uk/documents/2344/Dutch_Elm_info_sheet.pdf

Environment Agency data: Lidar data

DTM – Digital Terrain Model
(Zones of Theoretical Visibility)

DSM – Digital Surface Model
(Zones of Visual Influence)

Zones of Theoretical Visibility

 Areas visible from any of the three sites

Sheffield:

Zones of Visual Influence

 Areas visible from any of the three sites

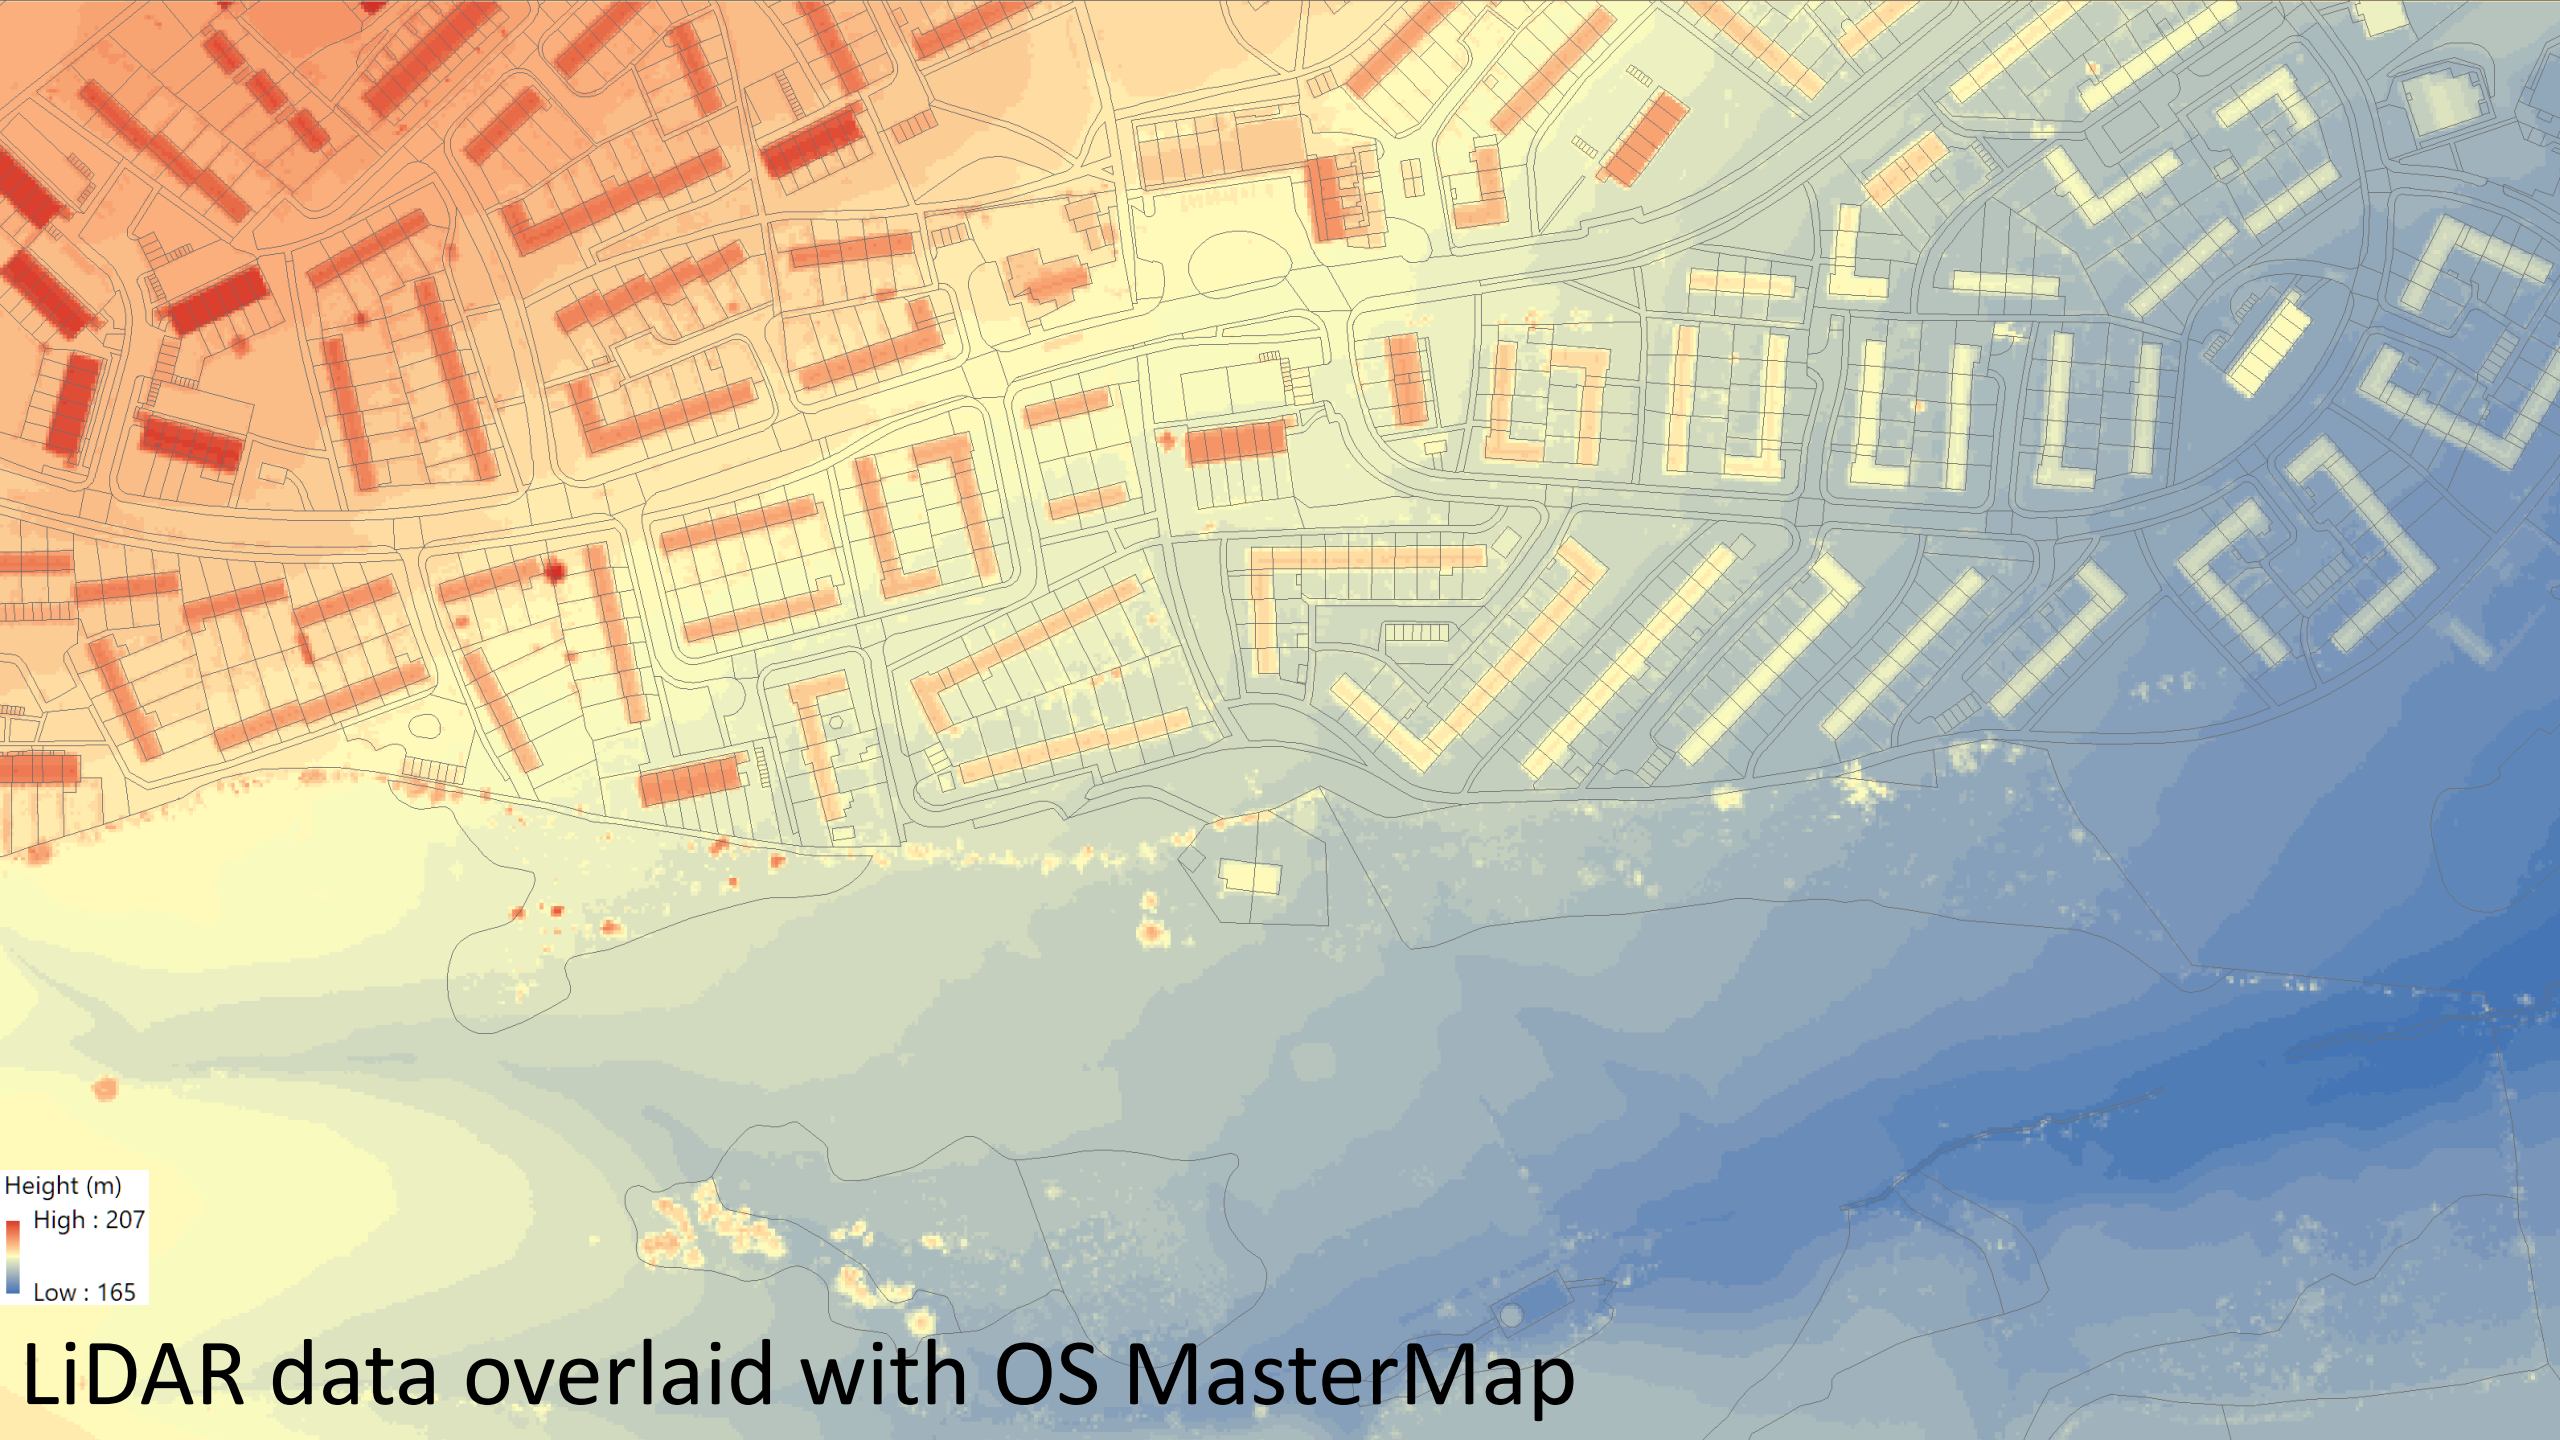

Sheffield:

Height (m)
High : 207
Low : 165

LiDAR data

Height (m)
High : 207
Low : 165

LiDAR data overlaid with OS MasterMap

Hybrid – buildings block the view but vegetation is ignored

 Areas visible from any of the three sites

Sheffield:

Red = area not visible from yellow reference point
Green = area is visible from yellow reference point

Red = area not visible from yellow reference point
Green = area is visible from yellow reference point

Conclusion

- Mapping is more complex than it looks
- Mapping change is even harder!
- But it can provide a tool to monitor and evaluate
- with the potential for identifying areas for further investigation
- and explore the visual impacts
