As the professional body for the landscape sector, it is the Landscape Institute’s role to continually reflect the changing needs of landscape practitioners, helping them remain trusted, relevant and successful, today and in the future.

In addition to awarding professional recognition to landscape architects, the Landscape Institute recognises the need to:

- Welcome more practitioners who work across the breadth of landscape fields.
- Reflect new and emerging areas of practice.
- Attract, include and support professionals from wider and more diverse backgrounds.

After a period of research starting in 2017 the LI has been working with our sector to develop this new framework that reflects current and emerging areas of landscape practice. This is the first major update to our entry requirements in over a decade. We have also sought to ensure that skills related to sustainability, climate, resilience and biodiversity are central to the work of landscape architects and related landscape professionals going forward. Reflecting our research, we have also focused more on professional, people and human skills in our framework. It has also been drafted to be jurisdictionally neutral reflecting the divergence in law, especially in planning, across the UK nations and the significant number of LI members who now practice in locations around the world.
Timeline of the development of our Competency Framework

2017
- Education and practice review research. This included ‘The State of Landscape’ practice review seeking the views of landscape professionals and the Education Review to help us understand current challenges and trends in the sector, joining the dots between education providers, employers and professional bodies

2018
- Publication of the ‘Future State of Landscape’ report which collates the findings from the above research and sets out the case for updating our entry standards and developing a Competency Framework
- Development of competency areas

2019
- Consultation on competency areas
- Establishment of new Entry Standards Steering Group
- Recruitment of a team of Technical Authors
- Member approval for a new Technician grade of membership

2020
- Board approval of draft Competency Framework
- Public consultation – the subject of this paper
- Board approval of Competency Framework for consultation – to follow this consultation

2021+
- Phased implementation of the Competency Framework
We need your feedback and expertise to help us to now finalise the framework

We are seeking your views on the detailed definitions and proposed topics for inclusion as part of proposed requirements for the pathways to Chartered and Technician grades of membership going forward. This will help us to make sure that the definitions and requirements for membership are appropriate and fit for purpose.

To help us gather and assess your feedback, we have created an online consultation, which will be open until 31 May 2020. We will also be running a series of online workshops.

How will we use the Competency Framework?

- The Landscape Institute Competency Framework will describe the main skill areas that our members and thus the profession as a whole spans. It will be used to:
  - Set clear standards of entry to each level of professional membership
  - Serve as a professional development tool for members and helps members to identify and record their Continuing Professional Development (CPD) needs and activities
  - Help define the content of Continuing Professional Development (CPD) events that the LI and potential partners deliver
  - Support employers with recruitment and progression of their emerging talent
  - Be used for assessing expert groups in the landscape profession
  - Align landscape with other professional sectors
About the structure of the Competency Framework

The Competency Framework reflects the common skills that the landscape profession as a whole need to deliver their professional advice to others. We have chosen three categories to group the similarities and differences of landscape practice into a simple structure:

**Landscape competencies**
These are the skills, behaviours and areas of knowledge that are unique to the landscape profession. (Referred to as ‘working with place and nature’ competencies.)

**Professional competencies**
These are the skills, behaviours and areas of knowledge that are considered essential amongst professionals across all sectors. These closely reflect skills many other professions also require of their members.

**Specialist competencies**
These are the specific skills, behaviours and areas of knowledge required for certain fields of practice across the entire landscape profession. Most members would only have a selection of these skills.

In the future, an individual’s level of achievement against each competency would be assessed as follows:

**A. Understanding**
The individual understands the application of this competency in practice.

**B. Able**
The individual has experience of applying this competency in practice.

**C. Accomplished**
The individual consistently applies this competency in practice and can confidently make decisions and recommendations in this area.

**D. Expert**
The individual has expert knowledge of this competency and extensive experience applying it in practice. They are recognised as an authority in this area by others within and/or outside their organisation.
How will we use the Competency Framework to set standards of entry to membership?

**Technician**

We are introducing a new grade of Technician membership as we already have many technicians and landscape assistants working in our sector and for new entrants to the sector there will be an Apprenticeship for Landscape Technicians. Potential job roles for this grade of membership include:

- Junior Landscape Architect, Landscape Assistant, Landscape Technician, Landscape Visualiser
- Landscape CAD Technician, BIM Technician, GIS Technician, Landscape Technologist, Assistant Parks Manager, Parks Officer and Landscape Clerk of Works.

This new membership grade was agreed by members last year and we are now needing to set entry requirements. For many this will be a destination in its own right whilst for others it may be a stepping stone from which they may in the future seek Chartered Membership.

Page 7 illustrates the number and level of competencies that new Technician members will need to demonstrate.

**Chartered member**

As we increasingly welcome practitioners from a range of landscape fields of practice we will be more specific about the educational requirements and competencies required for those wishing to call themselves a Chartered Landscape Architect. This will ensure that we maintain equivalence to International Federation of Landscape Architecture (IFLA) requirements for landscape architects. There will be no change for any existing CMLI.

Once completed, the Competency Framework will be used as a basis to determine entry requirements for every new member entering the profession at different professional grades of membership.

There will, therefore, be two pathways to Chartered Membership:

1. Chartered Landscape Architect
2. Chartered Landscape Professional

Page 8 illustrates the number and level of competencies that new members on both pathways to chartership will need to demonstrate.
Landscape Institute entry standards consultation
April 2020

Specialist competencies

1 at Level C or 2 at Level B from entire list of specialist competencies

Maximum of 1 from:
- Contract administration (this must be taken to Level C by anyone wishing to work as a Contract Administrator)
- Contract management
- Procurement and tendering

Maximum of 1 from:
- Design – garden
- Design – landscape
- Design – public realm

Professional competencies

Members need to achieve all competencies at levels indicated:
- Level A
- Level B

Plus 1 other from list at Level B

Landscape competencies

Members need to achieve all competencies at levels indicated:
- Level A
- Level B

Plus 2 others from list at Level B

These competencies are common across all professional sectors.

Common across all landscape sectors, these competencies define the unique nature of our profession. All future members will be required to meet them at some level.
Specialist competencies

1. Chartered Landscape Architect Pathway
Choose from specialist competencies in dashed boxes:
- 3 at Level C and 2 at Level B

Maximum of 1 from:
- Contract administration
- Contract management
- Procurement and tendering

Maximum of 2 from:
- Design – garden
- Design – landscape
- Design – public realm

2. Chartered Landscape Professional Pathway
Choose from the entire list of specialist competencies:
- 3 at Level C and 2 at Level B

Maximum of 1 from:
- Contract administration
- Contract management
- Procurement and tendering

Maximum of 2 from:
- Design – garden
- Design – landscape
- Design – public realm

Professional competencies

Members need to achieve all competencies at levels indicated:
- Level A
- Level B
- Level C

Landscape competencies

Members need to achieve:
- 5 at Level C and
- 5 at Level B

and:
- Sustainability, climate change and resilience at Level C

Common across all landscape sectors, these competencies define the unique nature of our profession. All future members will be required to meet them at some level.
Next steps

This is the final major stage of member and practitioner consultation for this new LI competency framework. Alongside the online survey, there are a series of online workshops being run by the LI during May. It is intended that all consultation will be completed by the end of May 2020. The Entry Standards Steering Group will be consulted on the results of the consolidated feedback from this consultation in early June.

The Technical Authors will then revise the competencies based on this feedback by the end of June 2020 and the revised versions will be reported to the LI’s Education and Membership Committee and then the LI’s Board of Trustees later in the year.

The framework is due to be published in late 2020 with the intention of beginning gradual implementation of it for CPD events and new membership enrolments on a pilot basis in 2021. We will then review the findings from the pilot before a wider roll out. This will become a basis for membership assessments supported with relevant guides across most types of membership. It will replace our current LI elements and areas of practice document.

The intention is that the framework is dynamic and can be easily added to with new specialist competencies in the future as required, to ensure that it remains relevant and up to date with any changes in the sector.

As communicated throughout this project Existing Pathway to Chartership candidates will have at least 2 years from after this new framework is adopted (after mid 2021) to complete examinations under our existing entry standards (at least until 2023) as we transition over time to a new system of entry based on this emerging framework. We will also be seeking some existing pathway candidates to assist trialling any new membership entry requirements arising from this project.

You may find answers to your questions in our FAQs at (landscapeinstitute.org/entry-standards/) but if you would like to discuss or feed into the project further please contact:

Christina Hirst
Entry Standards Consultant

Appendix

The competency areas

**Landscape competency**
These are the skills, behaviours and areas of knowledge that are unique to the landscape profession. (Referred to as ‘working with place and nature’ competencies.)

**Professional competency**
These are the skills, behaviours and areas of knowledge that are considered essential amongst professionals across all sectors. These closely reflect skills many other professions also require of their members.

**Specialist competency**
These are the specific skills, behaviours and areas of knowledge required for certain fields of practice across the entire landscape profession. Most members would only have a selection of these skills.
# Landscape competency areas

## Community engagement

**Description**

Fosters participative community engagement. Proactively seeks out community values, concerns and aspirations, incorporates those values, concerns and aspirations into a decision-making process or processes and establishes an ongoing partnership with the community to ensure that the community’s priorities and values continue to be accounted for.

<table>

<td>Community engagement</td>
<td>Fosters participative community engagement. Proactively seeks out community values, concerns and aspirations, incorporates those values, concerns and aspirations into a decision-making process or processes and establishes an ongoing partnership with the community to ensure that the community’s priorities and values continue to be accounted for.</td>
<td>Demonstrates an understanding of the purpose and importance of community engagement, the relevant methods that can be adopted and appropriate timings.</td>
<td>Contributes to community engagement relating to landscape projects. Designs engagement activities and reports on community comments and concerns.</td>
<td>Identifies need for and undertakes participative community engagement and incorporates values, concerns and aspirations into a decision making process and establishes an ongoing partnership with the community.</td>
<td>Is a recognised authority on community engagement and is called upon to provide expert advice and recommendations on how to engage communities on a range of complex landscape projects.</td>
</tr>
</tbody>
</table>

**Description**

To be competent you will need to demonstrate that in relation to your landscape specialism you:

- Understand:
  - Community engagement
  - The importance for your landscape specialism
  - How to ensure inclusive engagement
  - The different methods of engagement
  - The tools and techniques that can be used to understand community views and values and to build consensus
  - Statutory requirements for consultation and community involvement
  - Best timing for different methods
  - How the political context may influence choice

- Can:
  - Identify stakeholders
  - Identify and minimise barriers
  - Design appropriate engagement methods
  - Proactively contribute to/participate in a range of community engagement activities including face to face and remote methods
  - Obtain, record, analyse and summarise feedback

- Can:
  - Develop plans for engaging communities on landscape projects
  - Undertake community engagement using a range of appropriate methods and sub-commissioning outside expertise where needed
  - Demonstrate the statistical significance of results
  - Make decisions based on the feedback from your engagement
  - Develop partnerships with communities relevant to your landscape specialism

**Are called upon to:**

- Provide expert advice to others on how to engage communities
- Train and develop others to proactively engage with communities
- Advise industry bodies (or similar) on best practice in community engagement

---

## Creative problem solving

**Description**

Identifies issues, challenges, and opportunities relating to landscapes and/or places and develops and implements effective solutions using initiative and creativity.

<table>
<thead>
<tr>
<th>Landscape competency</th>
<th>Description</th>
<th>Level A – Understanding</th>
<th>Level B – Able</th>

<tr>
<td>Creative problem solving</td>
<td>Identifies issues, challenges, and opportunities relating to landscapes and/or places and develops and implements effective solutions using initiative and creativity.</td>
<td>Demonstrates an understanding of the challenges and opportunities relating to landscapes/places, how to identify and recognise issues, challenges and opportunities and the potential solutions</td>
<td>Contributes to identifying how to apply creative solutions to solving landscape/places related issues, challenges and opportunities</td>
<td>Actively identifies challenges and opportunities of landscapes/places and solves problems using initiative, creativity and innovation</td>
<td>Is a recognised authority on creatively solving landscape/place related challenges and is called upon to provide expert advice and recommendations on finding and implementing creative and innovative solutions to challenges on a range of complex landscape/place projects.</td>
</tr>
</tbody>
</table>

**Description**

To be competent you will need to demonstrate that in relation to your landscape specialism you:

- Understand:
  - The range of opportunities and challenges facing landscapes/places
  - The methods for identifying issues, challenges and opportunities
  - Appropriate methods to reveal solutions to address issues, challenges and opportunities
  - How to account for a range of issues when finding solutions relating to landscape/places

- Can:
  - Identify issues, challenges and opportunities for simple projects
  - Assist in finding solutions that address issues, challenges and opportunities
  - Account for a range of issues in a simple landscape/place project

- Can:
  - Develop plans for finding innovative solutions to problems
  - Independently solve problems in complex projects
  - Show creativity, initiative and innovation in solving landscape/place problems
  - Implement effective solutions

- Are called upon to:
  - Provide expert advice on solving landscape/place related challenges
  - Train and develop others in creative problem solving
  - Advise industry bodies (or similar) on creative problem solving

<tbody>
<tr>
<td>Healthy places</td>
<td>Recognises landscapes and/or places as assets with the potential to improve health and wellbeing. Adopts the principles of healthy places that improve the physical aspects of the landscape (air, water and soil quality).</td>
<td>Demonstrates an understanding of the principles of healthy places and related national and local policies</td>
<td>Contributes to the planning/design and/or management of landscapes and places that positively influence the health and wellbeing of communities.</td>
<td>Creates landscapes or places that embed the principles of healthy places.</td>
<td>Is a recognised authority on the creation of landscapes as healthy places that improve health and wellbeing</td>
</tr>
<tr>
<td>Inclusive environments</td>
<td>Seeks to ensure landscapes and places are accessible and inclusive for all, by working to remove the barriers that create undue effort and separation.</td>
<td>Demonstrates an understanding of the principles and processes that deliver accessible and inclusive environments and the related legal requirements</td>
<td>Contributes to providing landscapes that are convenient and enjoyable to use by everyone and comply with legal requirements and policies.</td>
<td>Applies the principles and processes that deliver accessible and inclusive environments. Acknowledges diversity and difference.</td>
<td>Is a recognised authority on accessible and inclusive environments. Is called upon to provide expert advice and recommendations on how to ensure landscapes and places are accessible and inclusive to all.</td>
</tr>
</tbody>
</table>

**Healthy places**

To be competent you will need to demonstrate that in relation to your landscape specialism you:

- **Understand:**
  - The meaning of health and wellbeing including physical and mental aspects
  - Public health policy and practice and how this relates to landscape interventions
  - What makes a healthy landscape
  - The evidence base of links between attributes of the landscape and health and wellbeing
  - Social, personal and other environmental factors that affect health
  - The principles of healthy places developed by the Landscape Institute

- **Can:**
  - Contribute to applying the principles and approaches that are essential to the creation of healthy places
  - Propose specific interventions to achieve positive outcomes for people’s health and wellbeing through landscape
  - Work with other professionals to ensure that external environments are conducive to health

**Inclusive environments**

To be competent you will need to demonstrate that in relation to your landscape specialism you:

- **Understand:**
  - The meaning of inclusivity
  - Best practice guidance and standards
  - The diversity of user needs
  - Legal, planning policy, building regulations and health and safety requirements relating to inclusive environments

- **Can:**
  - Identify barriers that can create undue effort and separation
  - Apply best practice guidance standards
  - Acknowledge different user needs
  - Comply with legal, planning policy, building regulations and health and safety requirements relating to inclusive environments

- **Are called upon to:**
  - Champion accessible and inclusive landscapes/places
  - Provide expert advice to others on inclusive environments
  - Train and develop others to apply the principles and processes of inclusive environments
  - Advise industry bodies (or similar) on inclusive environments
<table>

<th>Level B – Able</th>
<th>Level C – Accomplished</th>
<th>Level D – Expert</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Landscapes as systems</strong></td>
<td>Understands and considers natural processes – soil, air, water, carbon and ecological systems and the role of human intervention including management and maintenance. Understands the important link between plants, animals, trees and materials and habitat development and biodiversity in urban and/or rural settings.</td>
<td>Demonstrates an understanding of natural processes and ecosystems and opportunities for improvements to biodiversity through landscape projects.</td>
<td>Considers natural processes and ecosystems on landscape projects and promotes opportunities to develop habitats and improve biodiversity.</td>
<td>Provides solutions to improve natural processes, ecosystems and biodiversity on landscape projects at all scales through intervention in a context relevant to a landscape specialism.</td>
<td>Is a recognised authority on landscapes as systems and is called upon to provide expert advice and solutions on how to integrate improvements to, and monitor the success of, landscape systems on complex projects and involving a range of interventions at multiple scales, in varying settings and in different climates and geographic locations.</td>
</tr>
</tbody>
</table>

**Level A – Understanding**

To be competent you will need to demonstrate that in relation to your landscape specialism you:

**Understand:**

- Landscapes as ecological systems
- The importance and relevance for your landscape specialism
- Natural environmental systems: water cycle, water filtration, ecosystems, plant life cycle, climate and microclimate, weather, geomorphological, carbon cycle and the interaction of these with anthropogenic systems
- Habitat development and succession
- The role of, techniques for, and implications of human intervention in natural systems
- Biosecurity and plant health

**Level B – Able**

To be competent you will need to demonstrate that in relation to your landscape specialism you:

**Can:**

- Identify the landscape systems relevant to each project/site/area
- Proactively contribute to improving biodiversity and biosecurity through landscape/place projects
- Contribute to interventions in the operation of natural landscape-based systems to achieve specific objectives for clients, society, wildlife, water, carbon, and stability and anticipate the implications of so doing
- Seek specialist advice when required

**Level C – Accomplished**

To be competent you will need to demonstrate that in relation to your landscape specialism you:

**Can:**

- Consider all natural environmental systems in landscape projects and activities
- Factor into decision making the interconnection between environmental systems and anthropogenic systems
- Orchestrate multiple interventions in environmental and anthropogenic systems to achieve objectives

**Level D – Expert**

To be competent you will need to demonstrate that in relation to your landscape specialism you:

**Can:**

- Provide expert advice to others on how to assess landscapes as systems, implement improvements and monitor success
- Train and develop others to apply the principles and processes of creating landscapes as systems
- Advise industry bodies (or similar) on creating landscapes as systems

---

**Landscape quality**

Promotes quality interventions that integrate with both the function and identity of a landscape and/or place putting land, water, drainage, energy, community, economic, infrastructure and other such resources to the best possible use.

**Level A – Understanding**

To be competent you will need to demonstrate that in relation to your landscape specialism you:

**Understand:**

- The various factors that may be associated with definitions of judgements about quality, and in relation to utility and functionality
- Methods for evaluating landscape quality and their limitations
- Standards relating to quality and quality assurance
- Appreciation of methods to improve quality of workflows, such as ‘internal customer’, BIM, stakeholder engagement,

**Level B – Able**

To be competent you will need to demonstrate that in relation to your landscape specialism you:

**Can:**

- Contribute to an objective evaluation of a landscape
- Develop plans for interventions to address matters of landscape quality
- Comply with relevant quality standards for own workflows
- Report on and illustrate aspects of landscape quality in an engaging and technically adept way
- Be able to handle objective and subjective aspects competently in communications
- Benchmark own performance using quality standards

**Level C – Accomplished**

To be competent you will need to demonstrate that in relation to your landscape specialism you:

**Can:**

- Ensure operation within the context of quality standards and explicit objectives for quality assurance
- Secure quality interventions which work in detail as well as strategically to meet client and societal needs
- Are capable of planning an evaluation of landscape quality when required
- Exploit mechanisms such as quality marks, awards, excellence frameworks and management systems to secure longer-term solutions
- Develop a quality-focus in organisational culture

**Level D – Expert**

To be competent you will need to demonstrate that in relation to your landscape specialism you:

**Are called upon to:**

- Provide expert advice to others on landscape quality
- Train and develop others to undertake quality interventions
- Advise industry bodies (or similar) on landscape quality
- Develop new national quality marks or standards

---

<td>Demonstrates understanding of the physical and social context of landscapes and/or places and the importance of this</td>
<td>Contributes to accounting for the physical and social context of landscapes and/or places</td>
<td>Actively assesses and considers the physical and social context of landscapes and/or places</td>
<td>Is a recognised authority on the context of landscapes</td>
</tr>
</tbody>
</table>

To be competent you will need to demonstrate that you:

**Understand:**
- The role of the Landscape Institute in supporting different landscape specialisms
- Other bodies relevant to your specialism
- The role of the different landscape specialists, including but not limited to designers, managers, scientists, planners, ecologists, urban designers and place managers
- The interaction between the different landscape specialists
- The role of other professionals and professional bodies in the built and natural environment

**Can:**
- Identify where other specialists should be involved
- Work with other landscape specialists
- Work with other professionals in the built and natural environment
- Collaborate with other landscape professionals to find solutions
- Collaborate with other professionals to find solutions
- Make decisions taking account of the input from other specialists

**Are called upon to:**
- Provide expert advice to others on the links between and the differences between the different landscape specialisms and professions
- Train and develop others to work with other specialists
- Advise industry bodies (or similar) on the landscape specialisms

**To be competent you will need to demonstrate that in relation to your landscape specialism you:**

**Understand:**
- The different drivers for which landscape context can be defined
- Methods for defining landscape context including landscape and townscape character
- The importance of defining landscape context
- How to assess the attributes of landscapes

**Can:**
- Explain the physical and social context of an area or topic under consideration
- Define landscapes at varying scales accounting for the physical and/or social context
- Contribute to assessing the attributes of landscapes

**Can:**
- Account for the physical and social context of landscapes
- Evaluate the distinctive, characteristic and functional components

**Are called upon to:**
- Provide expert advice to others on the context of landscapes
- Train and develop others to account for the context of landscapes
- Advise industry bodies (or similar)

<td>Planning, legal and regulatory compliance</td>
<td>Complies with the planning, legal and regulatory framework including but not limited to, town and country planning, access and rights of way, landscape and environment, statutory and non statutory designations associated with landscape, trees and woodlands, ecology, heritage and wildlife.</td>
<td>Demonstrates understanding of the planning, legal and regulatory framework relevant to landscape and to the individual’s country of practice</td>
<td>Applies the principles of relevant planning, legislation or regulations to simple projects</td>
<td>Provides reasoned advice and recommendations to ensure compliance with legal and regulatory requirements relevant to the landscape specialism. Represent clients to statutory bodies or other parties relating to planning, legal and regulatory compliance.</td>
<td>Is a recognised authority on planning, legal and regulatory compliance and is called upon to provide expert advice and recommendations on such compliance</td>
</tr>
</tbody>
</table>

To be competent you will need to demonstrate that in relation to your landscape specialism you:

**Understand:**
- The statutory process for making planning applications
- The Planning Appeal process
- Planning policy at national and sub-national levels
- The role of government in strategic infrastructure development
- Environmental Impact Assessment
- Building regulations relevant to the country of practice
- Legislation and regulations regarding access, easements and rights of way
- Statutory and non statutory designations associated with landscape, trees and woodlands, ecology, heritage and wildlife
- The broad structure of statutory and non-statutory guidance available relating to landscape
- Any mandatory requirements of the Landscape Institute

**Can:**
- Comply with the legal and regulatory framework relating to landscape, land, trees, species, habitats, heritage and rights of way in your country of practice
- Comply with planning requirements for landscape projects
- Take account of environmental impact assessments
- Comply with the requirements of statutory and, where appropriate, non statutory designations
- Comply with any mandatory requirements of the Landscape Institute

**Can:**
- Advise others on legal and regulatory compliance
- Can interpret the implications of emerging regulations
- Provide recommendations on how to comply with legal and regulatory requirements

**Are called upon to:**
- Provide expert advice to others on issues relating to planning, legal or regulatory compliance
- Train and develop others to comply with planning, legal and regulatory compliance
- Advise industry bodies (or similar) on planning, legal or regulatory compliance relating to landscape
- Represent clients to other bodies, e.g. at planning hearings or Public Inquiries

<tr>
<td>Professional judgement, ethics and values</td>
<td>Complies with the Landscape Institute’s Code of Conduct and Charter and relevant laws relating to professional responsibility relevant to the country of practice. Fosters and maintains a professional working relationship with clients and customers, and shows commitment to reflective practice and to developing and maintaining competence.</td>
<td>Demonstrates an understanding of relevant law and regulation and, at a high level, how to deliver landscape services in accordance with all of these.</td>
<td>Contributes to the delivery of landscape services in accordance with LI best practice guidance. Can identify ethics issues as they arise in the workplace and identify solutions. Actively seeks out professional development to improve practice.</td>
<td>Undertakes professional development in relation to yourself and colleagues. Undertakes the provision of advice and guidance to others on the LI Code and relevant law. Is a role model on best practice in customer service.</td>
<td>Is an authority on professional standards and competence in delivery across your organisation. Is the expert on professional negligence and misconduct or where the firm/organisation/entity may be legally liable. Can advise in these situations.</td>
</tr>
</tbody>
</table>

To be competent you will need to demonstrate that you:

Understand:
- The remit and structure of the LI
- The LI Code of Conduct — significance, content, requirements and breaches
- The relevant elements of the LI’s Royal Charter
- Professional ethics and ethical values
- Relevant laws relating to ethics and consumer protection
- Professional negligence
- Professional Indemnity Insurance
- How to deliver landscape services in accordance with law, regulation and LI requirements
- The importance of building good relationships with clients
- The rationale for the LI’s CPD requirements on landscape professionals, their applicability to you and your practice and what you need to do to keep your professional knowledge up to date
- The role of other relevant professions
- Employee’s duties
- Contracts with clients

Can:
- Deliver services in accordance with LI best practice ethical guidance and Code of Conduct
- Identify ethical situations as they arise in the workplace and identify solutions which serve the public interest as a priority
- Actively identify areas for professional development and seek out relevant CPD to address these
- Identify areas for professional development in relation to yourself and others within your firm/organisation/entity
- Provide advice and guidance on the application and interpretation of the LI Code and relevant law to individual and organisational practice
- Act as a role model and leads on best practice in customer service
- Offer mentoring and support to more junior members of the organisation/firm/entity in this area

Are asked to:
- Undertake a review of professional competence of the individuals working with the firm/entity/organisation
- Identify relevant organisation/wide professional development strategies and oversee their implementation
- Provide expert advice on instances where professional negligence may be an issue or where the firm/organisation/entity may be legally liable
- Identify appropriate solutions relevant to the circumstances

<tbody>
<tr>
<td>Design – garden</td>
<td>Formulates/interprets project briefs. Blends creative and artistic skills with a scientific understanding of horticulture, plants and materials to create and represent proposals for the design of gardens.</td>
<td>Demonstrates an understanding of the artistic and scientific knowledge bases that comprise the craft of garden design, primarily focused on small-scale, residential sites.</td>
<td>Takes a proactive role with clients in creating and sometimes overseeing construction of designs that demonstrate not just comprehensive understanding but originality of thought.</td>
<td>Has a repertoire of designs that is both large and diverse with many different site types and scales, including designs that involve major engineering/construction/reshaping of a site.</td>
<td>Is a recognised authority on garden design</td>
</tr>
</tbody>
</table>

**To be competent you will need to demonstrate that in relation to your landscape specialism you:**

**Understand:**
- Client communication and expectations, following the client’s expressed desires
- How to read and use the language of visual graphics that depicts landscape elements, whether by hand or computer-aided design
- How to analyze a site and accurately read conditions of light, water, soil quality, climate, etc.
- Basic aesthetic and horticultural considerations for plant selection
- Correct, practical selection of non-plant materials such as hardscaping, fences, etc.

**Can:**
- Develop original ideas and persuade the client
- Go beyond a basic site analysis to identify a site’s hidden potential
- Demonstrate a distinctive, recognizable style in visual graphics
- Select plants that meet all appropriate aesthetic and horticultural criteria but also expand the site’s scope and possibilities
- Employ a creative eye in selection of hardscaping, fencing, water features, and other non-plant elements

**Are called upon to:**
- Collaborate with architects or urban planners on complex projects interfacing architecture/streets with garden
- Mentor and support early-career garden designers
- Publish designs or write about design theory in magazines/books/electronic media

**TECHNICIAN PYRAMID**

**CHARTERED MEMBER PYRAMID**

<tr>
<td><strong>Design – landscape (all sectors including housing, play, sport and recreation)</strong></td>
<td>Formulates/interprets project briefs. Creates and represents proposals for the design, planning or management of landscape projects, including verbal and visual representation, two and three dimensional and temporal contexts. Presentation of design proposals to a range of professional and lay audiences.</td>
<td>Demonstrates an understanding of project / design briefs. Conversant with the principles and process of landscape design.</td>
<td>Contributes to the formulation of project / design briefs. Creatively involved in the design process and various stages / levels from concept through to detailed design.</td>
<td>Formulates project / design briefs. Manages the design process and creatively carries out the required design tasks at the various stages / levels from concept through to detailed design. Strikes the right balance between creativity and financial constraints. Uses industry standard tools / resources to aid and facilitate the design process. Communicates design ideas engagingly, verbally and visually, using industry standard methods. Complies with the designer’s ethical and legal responsibilities and applies them together with the relevant regulatory and planning frameworks.</td>
<td>Is a recognised authority on landscape design, called upon to provide advice on all aspects of design including: the creative process; ethical and legal responsibilities; industry standard tools / resources and communication / representation methods; and regulatory and planning framework. An authority on design quality and performance, familiar with past precedent, current trends and best practice examples. Regularly mentors and trains others.</td>
</tr>
</tbody>
</table>

To be competent you will need to demonstrate that in relation to your landscape specialism you:

**Understand:**
- Landscape design principles and process
- A project / design brief
- Various design stages from concept to detailed design
- Budgetary / financial constraints
- Industry standard tools / resources
- The importance of effective communication of designs (verbal and visual)
- The ethical and legal responsibilities of the designer
- Relevant regulatory and planning framework

**Can:**
- Work to a project / design brief
- Contribute to the design process
- Strike a balance between creativity and financial constraints
- Execute design tasks under supervision at various stages
- Contribute to managing budgetary / financial constraints
- Use industry standard tools / resources
- Contribute to communicating design ideas effectively verbally, in writing and using visual representation
- Comply with the ethical and legal responsibilities of the designer
- Apply relevant regulations and planning considerations

**Can:**
- Interpret client objectives and formulate project / design briefs
- Manage the design process effectively
- Creatively execute design tasks at various stages
- Manage and work within budgetary / financial constraints
- Use industry standard tools / resources for complex designs
- Communicate design ideas engagingly verbally, in writing and using visual representation
- Comply with ethical and legal responsibilities
- Apply relevant regulations and planning considerations for complex designs

**Are called upon to:**
- Provide expert advice on landscape design
- Train / mentor others on the various aspects of landscape design
- Provide expert contribution to creative and technical developments in landscape design
- Advise others on best practice in landscape design
- Act as expert witness regarding landscape design matters

<tr>
<td>Design – public realm</td>
<td>Designs a public realm that provides a connected, inclusive and intuitive user experience and responds to the local character of the area providing a sense of place. Creates designs that are vibrant, modern and with a distinct local character, that integrate maintenance needs with design needs and ensure that appearance is in keeping with structural and functional design concepts.</td>
<td>Demonstrates understanding of the context, local character and functions of the Public Realm. Supports a more senior colleague in developing, producing and communicating designs.</td>
<td>Contributes to setting out a clear analysis of the public realm: context, functions, issues and opportunities. Understands the role of other professions in the design of the public realm, where a Landscape Architect has responsibility and where they should seek advice. Designs public realm schemes with the support of a more senior colleague.</td>
<td>Leads projects on the public realm either as lead designer or in support of another professional. Advises on commission of appropriate consultants and surveys</td>
<td>Is a recognised authority on the design of public realm with a track record of delivering high profile projects or in special situations.</td>
</tr>
</tbody>
</table>

To be competent you will need to demonstrate that in relation to your landscape specialism you:

**Understand:**
- The important aspects of context which influence the design of the public realm
- Inclusive Design issues
- Healthy Street design
- Methods for surveying, mapping and communicating context, issues and opportunities
- Able to produce drawings supporting a senior colleague at each stage of the design process

**Can:**
- Run a simple public realm project under the supervision of a senior colleague
- Coordinate input from other professionals when leading a simple projects or input to a team supporting on a more complex project
- Produce Inclusive Designs that conform to design guidance
- Incorporate Healthy Street design principles
- Understand which baseline surveys are required, which a Landscape Architect is responsible for and undertake these
- Attend and contribute to project meetings
- Attend and contribute to stakeholder workshops and public consultations
- Understand the difference between a project in the adopted highway and one in private ownership and how this influences survey, design and consultation issues.
- Advise on and produce basic layout, drawing and specifications

**Can:**
- Lead more complex public realm projects
- Lead project meetings
- Produce best practice Inclusive Design
- Understanding the place of a particular scheme in different people’s journeys
- Incorporate best practice Healthy Street design
- Commission or advise on the commission of sub-consultants and surveys
- Devise engagement strategies
- Advise on more complex layout, drawing and specifications
- Produce programmes
- Implement legislative, planning and highway requirements

**Are called upon to:**
- Provide expert advice to others on public realm design
- Train and develop others in public realm design
- Advise others on best practice

<tr>
<td>Digital technologies</td>
<td>Use of computer software and equipment and other digital technologies, electronic tools, systems, devices and resources that generate, store or process data.</td>
<td>Demonstrates an understanding of the importance of appropriate equipment, electronic tools and computer software.</td>
<td>Contributes to the provision of appropriate equipment and tools.</td>
<td>Employs appropriate equipment and electronic tools to a variety of projects.</td>
<td>Is an authority on the provision of appropriate equipment and electronic tools. Is expert in the field.</td>
</tr>
</tbody>
</table>

To be competent you will need to demonstrate that in relation to your landscape specialism you:

Understand:
- The range of electronic equipment landscape professionals use for gathering data
- The range of computer software available for delivery of different projects, from writing reports to generating planting plans to hard surfacing details
- How to digitally generate 2D CAD/graphics representations
- How to digitally capture data
- Data capture technologies
- The process of 3D Modelling
- The role of a Geographic Information System (GIS)
- Building Information Modelling (BIM)
- Use of gamification software (Augmented Reality/Virtual Reality)

Can:
- Use appropriate equipment to gather data for simple projects
- Use appropriate software for projects
- Use GIS software for basic geographical understanding
- Use CAD for generating layout plans
- Use graphics packages for generating landscaping graphics
- Use software to digitally create 2D representations and export
- Specify what digital data is required for the project and how to acquire it
- Use GIS software to compile and display geographic data including shape files
- Use BIM software to compile landscape/project management data
- Use gamification software to illustrate landscape/townscape change

Can:
- Use electronic equipment for gathering data for complex projects
- Review the current state of equipment and software within the landscape practice/authority
- Use different software for delivering projects
- Use 2D representations in the workflow
- Use digital data for development projects and understand the limitations of the data
- Work with 3D data for both the development and surrounding topography
- Use GIS software to interrogate data for calculation purposes e.g. ZVIs/ZTVs
- Use BIM software to interrogate data
- Use gamification software to accurately illustrate change

Are called upon to:
- Provide knowledge of electronic equipment and computer software to wider audience
- Motivate others through training in the different areas of digital technology and computer software types
- Advise on CPD content
- Evaluate and advise on the effectiveness of electronic equipment and digital technologies within the workplace
- Provide internal and external CPD on software, 2D representation, 3D modelling, GIS and BIM
- Motivate others through training in the different areas of digital technology and computer software types
- Inspire others on the use of gamification software to visualise development

<td><strong>Education and knowledge exchange</strong></td>
<td>Undertakes knowledge exchange activities to share ideas, experience and expertise relating to landscape which is mutually beneficial to all parties involved.</td>
<td>Demonstrates knowledge and awareness of the available resources and channels for professional education and knowledge exchange.</td>
<td>Contributes consistently to ongoing development and dissemination of knowledge in the field.</td>
<td>Plays a significant role in contributing knowledge to the field and participating in ongoing dialogue on key issues.</td>
<td>Serves as a recognized and leading figure for learning and training in the field.</td>
</tr>
</tbody>
</table>

To be competent you will need to demonstrate that in relation to your landscape specialism you:

- **Understand:**
  - The importance of ongoing knowledge exchange for maintaining professional standards and dissemination of new information
  - Available resources, channels and memberships needed to satisfy continuing education or professional development requirements
  - How to continually build on existing knowledge through books, electronic resources, and professional networks

- **Can:**
  - Maintain an active and engaged presence in professional organizations, both online and face-to-face
  - Contribute to boards, committees or other workgroups committed to educational endeavors
  - Contribute to the development of course material

- **Can:**
  - Develop course and training material
  - Mentor and advise younger colleagues
  - Share or present own original theories, technical innovations, creative ideas or other original knowledge in professional forums
  - Teach basic level skills courses in university or college

- **Are called upon to:**
  - Teach specialized university and graduate-level courses or studios
  - Contribute original theories and ideas to textbooks
  - Share knowledge in academic journals
  - Provide leadership in professional associations and networks at a national and international level
  - Serve in a leadership capacity in a university setting
  - Mentor or advise students or younger colleagues carrying out original research in the field
  - Serve as consultant in reviewing or proposing new educational or professional standards or legislation related to the profession
**Specialist competency**

<tr>
<td>Leads on complex funding strategies and large scale or complex funding applications and large scale income generation initiatives encompassing business planning and commercialisation opportunities</td>
</tr>
<tr>
<td><strong>Level D – Expert</strong></td>
</tr>
<tr>
<td>Contributes to national thinking on funding and income generation in a landscape context</td>
</tr>
</tbody>
</table>

**To be competent you will need to demonstrate that in relation to your landscape specialism you:**

- **Understand:**
  - Types of funding
  - Sources of funding
  - Monitoring and evaluation techniques
  - Where to find sources of information relating to business planning
  - Information needed for funding applications
  - How to match a project to possible funders
  - How to measure success against a funder’s outcomes
  - How to construct a simple (project) budget and understand the key components of a business plan
  - Sources of income generation

- **Can:**
  - Write a successful funding application for a small to medium scale project
  - Construct a simple funding strategy involving multiple funding sources on one project
  - Devise and deliver an appropriate monitoring and evaluation approach for a funded project
  - Demonstrate the management of funding on a small / medium scale project
  - Contribute to writing a facility / site specific business plan
  - Contribute to generating income and commercialisation

- **Can:**
  - Write / lead on a successful funding application for a large / complex project (including commissioning consultants)
  - Effectively communicate the need for funding for a particular project
  - Lead on a funding strategy involving multiple funding sources
  - Devise an income generation strategy for a large project or whole service
  - Demonstrate the management of large and complex budgets
  - Contribute to / write / commission complex business plans

- **Are called upon to:**
  - Produce / contribute to sector specific guidance or publications
  - Speak at conferences / lead workshops on their area of expertise
  - Train / mentor others

<tr>
<td><strong>Habitats and species</strong></td>
<td>Considers the interrelationships of organisms with their environments and other species and how natural or human-led circumstances can influence habitat composition, diversity and condition and/or species behaviour, survival and population stability. Contributes to the protection, and enhancement of natural and/or semi-natural habitats, and/or wild species. Contributes to the management of existing and creation of new habitats to support wild species relevant to a given area of the world.</td>
<td>Demonstrates an understanding of ecology, the inter-relationships between habitats, species and environment primarily through a theoretical capacity and with limited or no practical experience.</td>
<td>With guidance and support applies an understanding of ecology and the inter-relationships between habitats and species with their environment through their work. Skills will cover a range of habitats and species at a broad level only.</td>
<td>Consistently applies understanding of one or a number of habitats and/or species relevant to the environment and area of work. Maybe skilled at a broad range of habitats and species or may be specifically knowledgeable on one or two habitat and/or species at a more in-depth level.</td>
<td>Is a recognised authority on one or a number of habitats and/or wild species and is called upon to provide expert advice, solutions and methods to assess, protect and enhance existing habitats and wildlife species. Expert in a particular field of study, methodology or approach such as habitat assessment, species surveys, re-introduction of wild species, in different climates and geographic locations.</td>
</tr>
</tbody>
</table>

To be competent you will need to demonstrate that in relation to your landscape specialism you:

**Understand:**
- Basic principles of ecology
- Common methodologies for classifying habitats relevant to the country or region working in
- The main techniques for, surveying habitats and species in their region
- How to identify limited or common range of species and/or habitats
- Relevant international and national legislation and policies in relation to protection of habitats and species in their region

**Can:**
- Under supervision, assess, provide advice or make recommendations appropriate to the protection and enhancement of the specific range of habitats and or wild species relevant to the country or region working in
- Apply knowledge and skills to small or simple scenarios, to guide design or management of habitats
- Remote-sensing, reporting, or practical surveys of habitats and species

**Can:**
- Provide advice and helps resolve more complex scenarios supporting the protection and enhancement of habitats and/or wild species
- Create new habitats and monitor approaches relevant to the species and/or habitats in region or country of work
- Apply knowledge and skills to large or complex scenarios, to guide design, management or approach to protect enhance existing habitats and/or wild species
- Support less experienced team members on standard processes, assessment methods and knowledge of a range of typical habitats and species
- Seek specialist advice primarily when dealing with complex projects or specialist habitats and species

**Are called upon to:**
- Provide expert advice to others on one or two complex or habitats, species or groups
- Contribute written material to journals, conferences or industry best practice on their specialist subjects, and more wider topics beyond your specialism
- Train and develop others to gain the skills, knowledge and practical experience around specialist habitats and/or species, assessment methods, and research approaches

<td>Heritage landscapes/places</td>
<td>Contributes to the identification conservation, management and/or celebration of heritage assets and landscapes. Understands and promotes the value of heritage and its role in shaping the cultural distinctiveness and the character of places and landscapes. Considers the social, cultural and economic value of heritage.</td>
<td>Demonstrates an understanding of the management needs of a range of historic assets, sites and landscapes and their role in shaping local distinctiveness and cultural identity.</td>
<td>Contributes to the protection and enhancement of historic character and assets. Contributes to the development of character and heritage.</td>
<td>Understands the significance and vulnerability of historic sites, features and landscapes, directing positive management in plans, policies and practice.</td>
<td>Is an authority on historic landscapes and a recognised advocate of the critical importance of conserving and restoring heritage sites, features and landscapes.</td>
</tr>
</tbody>
</table>

To be competent you will need to demonstrate that in relation to your landscape specialism you:

Understand:
- Historic landscape character assessment
- Basic historic periods e.g. bronze age, medieval
- The range of heritage designations (historic sites, buildings, features and places) and their management needs
- Relevant legislation and policy supporting heritage protection

Can:
- Identify, map, describe and assess heritage landscapes, sites and features
- Support the production of management plans for heritage assets and contribute to heritage management and restoration initiatives
- Consider how new landscapes and places can strengthen historic character

Can:
- Engage in heritage led approaches to place management and regeneration
- Include the management and restoration of heritage within plans and projects
- Use historic records, data and historic landscape characterisation
- Lead on the production of heritage management plans and policy

Are called upon to:
- Advocate for the importance and relevance of historic landscape character and the historic environment
- Provide specialist advice, guidance, training and/or research on heritage
- Contributes to national/international level policy, guidance and legislation supporting heritage protection

Ensures approach and methods adopted are appropriate to the specific circumstances and considers appropriate mitigation measures.</td>
<td>Demonstrates an understanding of the principles of landscape assessment</td>
<td>Contributes to impartial and proportional landscape assessments</td>
<td>Actively promotes and undertakes good practice in landscape assessment</td>
<td>Is a recognised authority on landscape assessment and is called upon to provide expert advice and contribute to industry guidance.</td>
</tr>
</tbody>
</table>

**To be competent you will need to demonstrate that in relation to your landscape specialism you:**

**Understand:**
- The relevant policy context
- Importance of opportunities and constraints advice arising from landscape and visual assessments to inform good design
- Where to find available industry guidance on landscape and visual assessment
- Understand EIA process and when / what this is triggered by
- Understands need for an impartial and proportional approach to landscape and visual assessment
- Aware of different types of assessment (landscape, townscape, seascape, capacity studies and character assessment)
- Aware of differences between landscape character assessment and visual assessments
- Aware of ecosystem services and natural capital
- Documentation required

**Can:**
- Utilise available industry guidance to undertake landscape and visual assessment
- Apply the relevant policy context
- Contribute to discussions and negotiations on EIA scoping and screening
- Undertake impartial and proportionate landscape and visual assessments
- Contribute to writing methodologies for landscape and visual assessments
- Discuss ecosystem services in relation to landscape and visual assessment
- Provide a supporting role for expert witness services
- Prepare and/or review relevant documentation

**Can:**
- Apply in depth knowledge of industry guidance and application in undertaking landscape and visual assessments
- Write methodologies for landscape and visual assessments
- Provide detailed analysis of ecosystem services

**Are called upon to:**
- Act as an authority on landscape and visual assessment
- Advise on best practice and contribute to industry guidance
- Train others to develop knowledge

<td>Landscape construction (materials and systems)</td>
<td>Identifies and selects appropriate palettes of materials with consideration of site, context, intended use, structural performance, sustainability characteristics, intended lifespan, maintenance and financial implications.</td>
<td>Demonstrates an understanding of the principles and processes relating to landscape construction. Conversant with the resources / tools for selecting appropriate landscape materials and construction methods (in line with sustainability principles), and with the production of technical documentation for contract purposes.</td>
<td>Contributes to the selection of landscape materials and construction methods / techniques appropriate to the site, context and intended end use, having regard to sustainability principles. Involved in the preparation of technical documentation and costings / financial information etc.</td>
<td>Selects appropriate landscape materials and construction methods / techniques, having regard to the site, context and intended end use, and sustainability principles. Leads on the preparation of technical documentation and costings / financial information etc: appropriate to the type of contract and work stage using industry standard tools and systems / software.</td>
<td>Is a recognised authority on landscape construction, called upon to provide expert advice to clients and public bodies on: landscape materials and construction methods; technical document production and industry resources, tools and systems / software; and regulatory, standards and guidance compliance, and appropriate forms of contract / procurement mechanisms.</td>
</tr>
</tbody>
</table>

To be competent you will need to demonstrate that in relation to your landscape specialism you:

**Understand:**
- The landscape construction process
- A programme of works.
- The principles of planting/ ecology and hard materials / engineering in both urban and rural contexts
- How to identify and select of appropriate construction materials and methods / systems in line with sustainability principles
- The relevant regulations, standards, guidance and compliance / consenting issues relating to landscape construction (e.g. British Standards, Building Regulations, Health & Safety, CDM Regulations, planning conditions)
- The tools / resources available (e.g. BIM, NBS, Revit) to assist the design and construction process and preparation of technical documentation
- Technical documentation content i.e. drawings (graphic info at various scales), specifications (materials and workmanship), schedules (quantities) and cost plans (i.e. approx. quantities, pre-tender estimate, tender pricing document)
- The role of other professionals e.g. QS (quantity surveyor) and such matters as standard method(s) of measurement and costing / pricing, tendering etc.

**Can:**
- Contribute to a programme of works
- Contribute to selecting / specifying appropriate landscape materials (hard and soft) and construction method(s) / technique(s) in line with sustainability principles
- Use industry standard resources, tools / systems and software e.g. BIM, NBS, Revit
- Apply / comply with relevant regulations, consents, standards and guidelines (e.g. British Standards, Building Regulations, Health & Safety, CDM Regulations, planning conditions)
- Contribute to preparing draft technical documentation, construction and management schedules and specifications, and cost estimates / financial information
- Liaise with other professionals e.g. QS on such matters as standard method(s) of measurement and costing / pricing, tendering etc.

**Are called upon to:**
- Provide expert advice on landscape construction
- Train / mentor others on: the various aspects of landscape construction
- Contribute to research in the field of landscape construction
- Advise industry, public bodies and others on best practice in landscape construction
<table>

<tbody>
<tr>
<td>Landscape ecology</td>
<td>Understanding of the spatial and temporary patterns that influence ecological function and processes of landscapes at a range of scales. Recognises the important interactions between humans and wildlife, so is inherently multi-disciplinary crossing between humanities, social science, ecology and geography. Primarily interested in the function of landscapes for wildlife and humans at a range of spatial scales and purposes (e.g. an individual species, ecosystem services or habitat connectivity).</td>
<td>Demonstrates a broad understanding of the importance of spatial and temporal patterns on influencing ecological function of landscapes in their region. Understanding may be achieved through a theoretical capacity or practical experience (e.g. species surveying) but will have limited experience in applying principles to improve ecological function.</td>
<td>With guidance and support applies an understanding of the importance of spatial configuration of different land uses, habitat types, structure and management in influencing the function of landscapes – for wild species, and humans. Application of knowledge will be limited to small or simple scenarios, to guide design or land management.</td>
<td>Consistently provides solutions to improving the understanding of landscape pattern in influencing function for wild species and/or human needs. Provides advice and helps resolve more complex issues in research and/or practice around landscape function at larger spatial scales where multiple factors will be at work.</td>
<td>A recognised authority on landscape ecology and is called upon to provide expert advice, guidance and solutions in their region or further afield. Expert in a particular subject e.g. statistical modelling for habitat connectivity and its application in different climates and geographic locations.</td>
</tr>
</tbody>
</table>

To be competent you will need to demonstrate that in relation to your landscape specialism you:

Understand:
- Basic principles of landscape ecology and terms such as Landscape Metrics, home range, and structural elements such as patch, mosaic and corridor
- Common models for analysing complex data sets
- Geographical Information Systems (GIS) and remote sensing data in understanding complex spatial data sets over time
- Regional approaches, projects and policies to improve ecological function at a range of spatial scales

Can:
- Apply basic principles of landscape ecology (e.g. habitat connectivity, habitat mosaic) to projects to improve ecological function at small spatial scales
- Use or apply models to practical or research situations, but requires support to interpret data, run models
- Use GIS systems and/or remote sensing techniques
- Apply regional approaches and policies to improve the ecological function of landscapes in their region

Can:
- Apply more complex principles to projects (e.g. home range, edge effect, patch size) at a variety of spatial scales and species
- Work with one or more models to understand landscape processes and interpret results for wider release
- Use in GIS and remote-sensing data to inform projects at a range of spatial scales and purposes and for interpreting complex data sets using standard tools and plug-ins
- Provide advice on policy, methodologies for implementation at the landscape scale through regional projects, land management strategies, planning guidance

Are called upon to:
- Provide expert advice to others on the principles, analysis and interpretation of landscape pattern on ecological function for a given area/ focus
- Use in depth working knowledge of methods and models to analysis landscape patterns
- Use statistics and analyse complex data sets using GIS
- Contribute written material to journals, conferences or industry best practice on specialist subjects
- Provide technical expertise to inform regional planning policies, review project success

<tr>
<td><strong>Landscape engineering</strong></td>
<td>Works in interdisciplinary teams to apply principles of engineering and other sciences to the design and creation of anthropogenic landscapes (human landscapes). Holistically considers landforms, substrates, ecology and vegetation throughout all phases of design and construction.</td>
<td>Demonstrates understanding of engineers within projects. Is aware of the different disciplines within engineering and understands the responsibilities of a Landscape Architect and when they should seek the advice of an engineer.</td>
<td>Contributes to an interdisciplinary team working in partnership with engineers proving advice on landscape aspects of the project.</td>
<td>Leads interdisciplinary teams or the landscape input to large or complex projects. Advises on commission of appropriate consultants to form a multi-disciplinary team and what surveys or studies are required to fulfil a commission. Uses knowledge of engineering to support or challenge engineering assumptions with implications for the landscape or public realm to develop a better solution.</td>
<td>Is a recognised authority in a particular area of Landscape Engineering able to direct engineers to deliver additional value to a project. Has a track record of delivering high profile projects in one or more areas of Landscape Engineering.</td>
</tr>
</tbody>
</table>

To be competent you will need to demonstrate that in relation to your landscape specialism you:

### Understand:
- The different disciplines within engineering and their different roles within a project e.g. structural, highway, drainage, electrical, geotechnical, utilities
- The role, responsibility and limit of responsibility of a Landscape Architect in an interdisciplinary team

### Can:
- Contribute to an interdisciplinary project under the supervision of a senior colleague
- Coordinate input from other professionals where leading a simple projects or input to a team supporting on a more complex project
- Have an understanding of engineering issues such that you understand their implication for landscape issues
- Work on coordinated drawing and specification packages in an interdisciplinary team referencing drawings appropriately
- Communicate effectively with engineering teams to ensure a fully coordinated package of information

### Can:
- Lead interdisciplinary teams on complex projects
- Lead project meetings
- Produce best practice projects
- Commission or advise on the commission of sub-consultants and surveys
- Devise engagement strategies
- Set up project strategies for information exchange within interdisciplinary teams
- Understand timescales and produce programmes
- Implement legislative requirements and best practice design guidance

### Are called upon to:
- Provide expert advice to others on a particular area of Landscape Engineering
- Develop innovative strategies or designs that challenge socially or environmentally damaging engineering solutions
- Train and develop others in a particular area of Landscape Engineering
- Speak at conferences
- Advise industry bodies (or similar)

<td>Landscape planning and/or policy</td>
<td>Develops and/or applies strategies, policies and plans to create successful environments, in both urban and rural settings, for the benefit of current and future generations. Advises on or manages proposals for change which may affect the landscape. Assesses and seeks to resolve environmental, economic and social opportunities and constraints and take these into account in addressing a landscape’s potential and capacity to accommodate change. Contributes to applications for planning consents.</td>
<td>Demonstrates an understanding of landscape and environmental planning and policy.</td>
<td>Contributes to formulating and/or interpreting strategic plans and/or development proposals from a landscape and environmental planning policy perspective.</td>
<td>Formulates and/or interprets strategic plans and/or development proposals from a landscape and environmental planning policy perspective.</td>
<td>Is a recognised authority on landscape and/or environmental planning.</td>
</tr>
</tbody>
</table>

To be competent you will need to demonstrate that in relation to your landscape specialism you:

**Understand:**
- Landscape and environmental planning principles
- Core environmental and sustainability issues
- Tensions between environmental, social and economic issues
- Key drivers behind landscape change
- Relevant planning and environmental legislation, and regulatory and policy framework
- Process of policy making
- Distinction between forward (strategic) planning and development control (scrutiny of planning applications)
- Principles and process of landscape and/or environmental assessment, in particular EIA and/or LVIA

**Can:**
- Contribute to formulating and/or interpreting strategic plans and/or development proposals
- Apply understanding of related landscape, environmental and sustainability issues
- Contribute to applying and/or ensuring compliance with relevant legislation, regulations and policy
- Contribute to carrying out and interpreting/commenting on landscape and/or environmental planning documents e.g. LVIA
- Contribute to providing reasoned advice on landscape and/or environmental planning matters

**Can:**
- Formulate and/or interpret strategic plans and/or development proposals
- Advise on related landscape, environmental and sustainability issues
- Apply and/or ensure compliance with relevant legislation, regulations and policy
- Carry out and interpret/comment on landscape and/or environmental planning documents e.g. LVIA
- Provide reasoned advice on landscape and/or environmental planning matters

**Are called upon to:**
- Provide expert advice on landscape and/or environmental planning
- Train/mentor others on the various aspects of landscape and/or environmental planning
- Contribute to research and developments in landscape and/or environmental planning
- Advise on best practice in landscape and/or environmental planning

<tr>
<td>Landscapes/places and people (including tourism)</td>
<td>The sustainable management of visited and popular landscapes, sites and destinations. Promoting accessible, inclusive places and positive experiences for visitors in urban and/or rural environments. Mitigating visitor impact to conserve the fabric of place and make space for nature. Monitoring both the quality of a place and user experience to ensure responsive management and improvement.</td>
<td>Demonstrates an understanding of the basic principles of sustainable tourism and destination management in a landscape context.</td>
<td>Contributes to the development of monitoring frameworks, visitor management plans and the implementation of management activity.</td>
<td>Leads on destination management planning for well visited places/lakescapes, developing and implementing effective strategies and management responses.</td>
<td>Is an authority on sustainable destination management. Provides expert advice and guidance at a national level, advocating sustainable, landscape led solutions to complex destination management challenges.</td>
</tr>
</tbody>
</table>

To be competent you will need to demonstrate that in relation to your landscape specialism you:

- **Understand:**
  - The range of issues facing well visited site and landscapes
  - Management responses to visitor pressure (e.g. erosion control/ signage)
  - Visitor management tools and management documents

- **Can:**
  - Recognise visitor related issues and challenges for specific sites and landscapes
  - Contribute to the production of Visitor / User Management Plans
  - Contribute to implementing management responses
  - Contribute to the monitoring of visitor numbers, experience and visitor impact

- **Can:**
  - Plan and implement monitoring of visitors and visitor impact, using the results to inform effective management
  - Produce and implement comprehensive visitor/user management plans and strategies
  - Influence place branding, marketing and interpretation activities to manage pressures

- **Are called upon to:**
  - Provide strategic advice and guidance on visitor management for multiple sites and landscapes
  - Advocate for the principles of sustainable tourism and visitor management for places and landscapes
  - Research innovative tools and methods for visitor management and train others

**TECHNICIAN**

**PYRAMID**

**CHARTERED MEMBER PYRAMID**

To be competent you will need to demonstrate that in relation to your landscape specialism you:

**Understand:**
- A range of potential land management objectives
- The pressures and forces for change on rural and peri-urban landscapes.
- Potential land management responses to address forces for change and deliver landscape objectives.
- Landscape conservation and restoration

**Can:**
- Interpret landscape management plans and strategies at a range of scales, e.g. catchments
- Support the communication of management plans and initiatives to delivery partners and stakeholders
- Work with others to support the delivery of landscape management initiatives
- Contribute to conserving and restoring landscapes

**Can:**
- Plan, produce and implement detailed management plans and strategies for landscapes and places
- Involves partners, landowners and local communities in establishing and implementing land management objectives at a range of scales
- Communicates land management objectives and initiatives effectively and advises others on implementation
- Monitor landscapes to ensure landscape management objectives are being met
- Collaborates with others to conserve and restore landscapes

**Are called upon to:**
- Advise on strategic landscape management at a national or international level
- Advise upon the effectiveness of landscape management strategies
- Advise on the production of national level policy, legislation and guidance

<tbody>
<tr>
<td>Master Planning</td>
<td>Determines the future development of an area (urban and/or rural) by setting a vision, framework and design guidance showing how it will be achieved. Works collaboratively in a multidisciplinary team to provide integrated solutions that meet operational and commercial objectives whilst being responsive to the environment and the needs of local people and communities.</td>
<td>Demonstrates understanding of the context, local character and functions of the Master Plan. Supports a more senior colleague in communicating analysis, design development and proposals.</td>
<td>Contributes to setting out a clear analysis of the Master Plan area: context, functions, issues and opportunities. Understands the role of other professions in the Master Plan, where a Landscape Architect has responsibility and where they should seek advice. Designs basic Master Plans with the support of a more senior colleague.</td>
<td>Leads Master Planning projects either as lead professional or in support of another professional. Advises on commission of appropriate consultants and surveys.</td>
<td>Is a recognised authority on Master Planning with a track record of delivering high profile projects or in special situations.</td>
</tr>
</tbody>
</table>

To be competent you will need to demonstrate that in relation to your landscape specialism you:

**Understand:**
- The important aspects of context which influence the Master Plan
- Inclusive Design issues
- Methods for surveying, mapping and communicating context, issues and opportunities
- Able to produce drawings supporting a senior colleague to communicate analysis, design development and proposals

**Can:**
- Run a simple Master Planning project under the supervision of a senior colleague
- Coordinate input from other professionals when leading a simple project or input to a team supporting on a more complex project
- Produce Inclusive Designs that conform to design guidance
- Understand which baseline surveys are required, which a Landscape Architect is responsible for and undertake these
- Attend and contribute to project meetings
- Attend and contribute to stakeholder workshops and public consultations
- Understand issues relating to vision, strategic framework, neighbourhood character, various uses and how they mix or neighbour one another, land ownership, open space and the public realm, biodiversity, green infrastructure, integrated water management, utilities, movement and transport
- Advise on and produce layouts

**Can:**
- Lead Master Plan projects
- Lead project meetings
- Produce best practice Inclusive Designs understanding how different people’s journeys will be affected by different options
- Commission or advise on the commission of sub-consultants and surveys
- Devise engagement strategies
- Set out layouts for masterplans
- Understand timescale and produce programmes
- Set out strategies, taking advice where appropriate, for: vision, strategic framework, neighbourhood character, various uses and how they mix or neighbour one another, land ownership, open space and the public realm, biodiversity, green infrastructure, integrated water management, utilities, movement and transport

**Are called upon to:**
- Provide expert advice to others on Master Planning
- Train and develop others in Master Planning
- Advise on best practice

<tbody>
<tr>
<td>Natural Capital &amp; Ecosystems Services</td>
<td>Integrates natural capital approaches into landscape management, landscape planning and/or the design of green infrastructure to conserve and enhance ecosystem services and build resilience. E.g. to climate effects. Recognises natural capital types and the range and value of ecosystem services that flow from them at different scales.</td>
<td>Demonstrates an understanding of the principles of natural capital and ecosystem services and capital accounting.</td>
<td>Contributes to the mapping of natural capital and the production of ecosystem accounts and to landscape practice that seeks to enhance ecosystem goods and services.</td>
<td>Undertakes natural capital studies on a landscape scale, producing ecosystem accounts. Embeds natural capital approaches within landscape plans, policies and projects.</td>
<td>Is an authority on natural capital and ecosystem services accounting, has inputted into national/international studies and accounts and provides advice and guidance on strategic level policy and legislation.</td>
</tr>
</tbody>
</table>

To be competent you will need to demonstrate that in relation to your landscape specialism you:

**Understand:**
- The basic methods of natural capital and ecosystem services mapping and accounting using valuing tools and techniques
- Different natural capital types and how these relate to different landscapes
- The range of ecosystem goods and services that can flow from natural capital

**Can:**
- Take advice and guidance to map and describe natural capital types using landscape and habitat data
- Produce basic ecosystem flow information for different natural capital types
- Understand the principles behind managing landscapes to increase flows of ecosystem services

**Can:**
- Map and describe natural capital information (over a range of scales), interpreting ecosystem services flows and valuing information to produce ecosystem services accounts
- Plan for the management, enhancement and restoration of ecosystem services within a sphere of landscape practice. e.g. landscape management or landscape design
- Use available natural capital tools to take landscape management decisions

**Are called upon to:**
- Advise on strategic policy and legislation for the management of landscapes and places for ecosystem services.
- To advise nationally and internationally on natural capital accounting for landscapes
- Contribute to understanding and monitoring the strategic ‘state’ of natural capital and ecosystems services on a national level

**TECHNICIAN PYRAMID**

</tr>
</thead>
<tbody>
<tr>
<td>Parks management</td>
<td>Recognises the importance of urban green spaces (to include parks, playing fields, natural / semi-natural green spaces, playing fields, allotments, play space, including their ecological, economic, socio-cultural and heritage roles. Considers the wider strategic and functional roles as well as site specific management issues. Understands the balancing of political, societal and environmental needs with the resources available.</td>
<td>Demonstrates a broad understanding of the importance of urban green spaces and of green space strategies, operational and management planning. With guidance and support is able to apply the principles at a site specific level across a variety of urban green space types. Applies appropriate management standards for differing green space types. Contributes to wider strategic thinking about green space systems and green infrastructure. Provides a strategic overview across a wide variety of urban green space types typically across a whole authority area. Will be the advocate for urban parks and green spaces in their local and regional political environment. Deals with complex issues on a larger spatial, resource and financial scale.</td>
<td>A recognised authority in urban green spaces management who is called upon to provide advice at a regional or national scale. Expert in a particular field such as strategic planning, management planning, resource management, heritage restoration and innovation. Provides training or support to others outside of their organisation.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

To be competent you will need to demonstrate that in relation to your landscape specialism you:

**Understand:**
- The existence of national policy, research and guidance and where to source it.
- The various stakeholders at an authority wide and site-specific levels.
- How to manage site specific resources.
- Community and stakeholder engagement.
- Resource planning.
- Green Flag and its role within the sector.

**Can:**
- Apply the principles to solve issues at a site specific or small spatial scale e.g. through production of a management plan, specification, Service Level agreements or similar.
- Recognise how to improve a site to appropriate quality standards (e.g. Green Flag Award).
- Lead on small to medium scale projects.
- Manging site specific or area based budgets and resources.
- Engage communities and stakeholders in managing, maintaining and developing sites.

**Can:**
- Manage a wide variety of green space types.
- Lead small to large multi-disciplinary teams often at an authority wide scale or outsourced services, to include contract management, monitoring where appropriate.
- Lead on complex large-scale projects.
- Lead on organisational change.
- Involve a wide range of stakeholders, partners, politicians, consultants, contractors and local communities.

**Are called upon to:**
- Provide expert advice to regional groups, national panels, steering groups / working groups.
- Prepare author guidance, publications and contribute to policy at regional / national levels.
- Speak and advocate at regional and national level – conferences, seminars, offers guidance nationally.

<tr>
<td>Place management</td>
<td>Taking an integrated, local approach to the co-ordinated development of unique and inspirational places, harnessing the skills, experience and resources of the private, public and voluntary sectors. Improving places to provide economic prosperity, social cohesion, cultural identity and health and well-being, whilst making space for nature and building climate resilience. Incorporating activities such as town centre management, urban revitalisation, activity centre management, regeneration, management, marketing, economic development, neighbourhood management, neighbourhood renewal, socio-economic revitalisation, community development and business improvement district management</td>
<td>Demonstrates an understanding of the principles of place management, place-making, place marketing/branding, place shaping and visiting places including approaches to involving communities and other stakeholders.</td>
<td>Contributes to the development of place-based planning and delivery involving local place based networks/partnerships.</td>
<td>Works in partnership and with local place based networks/partnerships including communities, local government and other place-based stakeholders/anchors to develop and deliver place-based strategies, plans and programmes and policy and research.</td>
<td>An authority on place shaping, advising at national/ international level, advocating place management as an effective approach to the long-term, sustainable development of places.</td>
</tr>
</tbody>
</table>

To be competent, you will need to demonstrate that in relation to your landscape specialism you:

**Understand:**
- The theory, principles and processes behind place management
- Different aspects of place management e.g. regeneration/town centre management
- The importance of taking place-based approaches.
- The tools and techniques of community and stakeholder engagement
- The principles of integrated service delivery and collaborative working

**Can:**
- Contribute to the development of vision and long terms aims for places as part of a team or partnership
- Contribute to place based stakeholder involvement including stakeholder and community engagement processes
- Support effective place management partnerships and promote joint working
- Support the co-ordinated implementation of places-based initiatives

**Can:**
- Design and run place based stakeholder involvement processes that build consensus around the ambition and future direction of places
- Work with others to produce community and stakeholder owned place-based plans and strategies
- Lead effective community and stakeholder partnerships in the local level delivery of place-based initiatives
- Promote integrated approaches to place-based development including landscape approaches

**Are called upon to:**
- Lead on the strategic development and improvement of places
- Develop innovative tools, techniques and policy frameworks
- Provide expert input to processes, plans and policies
- Research effective ways of achieving place-based delivery
- Train and mentor those involved in place management partnerships and others

<tr>
<td>Planting and horticulture</td>
<td>Identifies and selects appropriate plant palettes with consideration of climate conditions, microclimate influences, soil, sun, moisture and wind. Evaluates and selects appropriate plants to perform environmental, functional and aesthetic roles for outdoor spaces and built environments. Applies the principles of creative planting design to form an artistic composition.</td>
<td>Demonstrates an understanding of the principles of appropriate plant selection, good design and specification</td>
<td>Contributes to the good design and specification of appropriate and aesthetically pleasing planting schemes.</td>
<td>Actively promotes good practice in planting design to create aesthetically pleasing planting schemes appropriate to climatic and location.</td>
<td>Is a recognised authority on planting and is called upon for expert advice on such.</td>
</tr>
</tbody>
</table>

To be competent you will need to demonstrate that in relation to your landscape specialism you:

Understand:
- The importance of consideration of climatic conditions, locational constraints and soils in plant selection
- Seasonal changes in plant species and importance of timing in plant installation
- Difference between native and non-native plants
- Basic plant species knowledge
- Principles of plant installation and the importance of correct specifications in contributing to plant health and good establishment
- Aware of the use of plants in green engineering schemes (green walls, roofs, slope stabilisation etc)
- Need to understand client expectations and likely management
- Contribution of planting to healthy and biodiverse landscapes

Can:
- Analyse locational and climatic conditions to ensure appropriate plant selection
- Select plant palette and design to create aesthetically pleasing, health and biodiverse planting schemes
- Specify correct planting specification to ensure plant health and establishment through to maturity
- Good plant species knowledge
- Identify opportunities for green engineering solutions
- Advise on plant management to ensure good health
- Good knowledge of nursery and growing techniques

Can:
- Evaluate complex climatic and locational conditions to ensure appropriate plant selection
- Advise client on correct specification requirements in complex situations to ensure good plant health and establish
- Apply considerable plant species knowledge
- Contribute to the design of green engineering solutions
- Apply in depth experience of nursery plant growing techniques
- Advise on suitability of programme and timings for planting

Are called upon to:
- Be a recognised authority on planting design and specification
- Provide in depth knowledge of green engineering solutions
- Advise on best practice
- Train others to develop knowledge
- Excellent plant species and planting techniques knowledge

<td>Procurement and tendering</td>
<td>Develops and implements procurement strategies and selects appropriate procurement routes for specific projects. Applies a range of tender processes from compilation of the tender through evaluation of tenders to selection and appointment of the contractor adopting appropriate procedures and requirements.</td>
<td>Understands the procurement process, the relevant regulations of their organisation and when to take advice.</td>
<td>Procures small to medium scale projects and manages the procurement cycle for lower value/risk projects</td>
<td>Leads development of commodity or less-complex category strategy development and implementation at local sector or national level.</td>
<td>Leads and delivers complex procurement, category or portfolio strategies at a local, sector or national level. Develops innovative solutions Responsible for managing multiple teams or projects. Involved in achieving national, sector-led or organisational procurement and commercial outcomes.</td>
</tr>
</tbody>
</table>

To be competent you will need to demonstrate that in relation to your landscape specialism you:

### Understand:
- Relevant procurement processes, wider procurement and commercial context
- Types of tender process relevant to your organisation
- The benefits and risks of good and bad procurement/commercial practice and the importance of early consideration in strategy or policy development
- Has sufficient awareness to recognise when and where to engage procurement or commercial expertise
- The role of a procurement manager
- How to coordinate customer and stakeholder communications. The process for receiving or raising requisitions and arranging purchase orders

### Can:
- Procure and tender small projects in public and/or private sector
- Undertake routine, lower value and/or lower risk procurements

### Can:
- Undertake strategic procurement and tendering
- Are commercially astute and use effective project management techniques
- Manage entire procurement process for higher value/risk projects

### Are called upon to:
- Take commercial lead on complex procurement
- Lead and manage complex, higher value or risk projects and/or teams
- Develop best practice guidance
- Provide industry expertise
- Share senior expertise with others

</table>

To be competent you will need to demonstrate that in relation to your landscape specialism you:

**Understand:**
- Policy and legislation underpinning protected landscapes
- The range of protected landscapes and their purposes
- The number and location of protected landscapes and their management strategies and processes
- Protected landscape governance and associated board structures

**Can:**
- Support protected landscape management planning processes
- Support initiatives to implement protected landscape Management Plans
- Support governance processes and procedures within a protected landscape

**Can:**
- Lead on the development of Management Plans for a protected landscape
- Lead and co-ordinates policy responses to national consultations and calls for evidence
- Monitor landscape change, identifying external pressures
- Manage effective partnerships to co-ordinate and enhance delivery
- Steer effective communications to raises awareness and promote the benefits of protected landscapes
- Build effective relationships and influences the work of others to further the objectives of the protected landscape

**Are called upon to:**
- Lead and advise on strategic approaches to protected landscape management
- Influence and advocate for protected landscape management legislation, policy, guidance and governance
- Support the work of protected landscapes at a national level providing strategic advice and guidance

<tr>
<td>Soil management, conservation and improvement</td>
<td>Understands and applies the principles of soil pedology, chemistry, physics, biology and mineralogy. Works to achieve soil conservation and restoration, including protecting agricultural soils and those on development sites, storing carbon, building climate resilience, preventing pollution and restoring contaminated land. Identifies and implements appropriate management strategy, research and monitoring.</td>
<td>Demonstrates an understanding of soil science and the importance of soils to ecology, economy and society. Understands the threats faced by soils and principles of soil conservation and restoration.</td>
<td>Contributes to advice, initiatives and projects to conserve and restore soils within own sphere of practice, e.g. design and construction, forestry, horticulture, agricultural land management and farming, water quality and flood management.</td>
<td>Leads on the management of soils at a strategic landscape scale. Advises others and works in partnership with a range of organisations to promote good practice and incentivise improved management of our soils.</td>
<td>Is an authority on soils and soil science. Engages in soil research and the development of innovative tools and techniques to conserve soils and restore soils where they have been degraded and/or contaminated.</td>
</tr>
</tbody>
</table>

To be competent you will need to demonstrate that in relation to your landscape specialism you:

**Understands:**
- Soil types, soil structure and soil pH. Understands basic soil ecology, hydrology and the principles behind soil conservation.
- The main threats to soil health e.g. organic matter loss, compaction and erosion, particularly in agricultural landscapes.
- The principles of restoration of degraded soils.
- The role of soils in ecosystem services provision including carbon storage and capture, water flow and quality and biodiversity.

**Can:**
- Understand more complex issues with respect to soils such as pollution and contaminated land.
- Understand tools and techniques for restoring degraded soils.
- With appropriate support, advise others on best practice soil management e.g. developers, farmers and land managers.
- Undertake soil survey and monitoring.
- Design simple soil conservation actions plans for sites.
- Contribute to the development of soil management plans and action plans.
- Support the development of soil conservation and restoration projects and initiatives.

**Can:**
- Manage soils to minimise erosion and increase organic matter.
- Manage soils to build resilience to climate change and contribute to carbon storage, flood attenuation and water quality.
- Advise others on soil management and restoration tools, techniques and practice.
- Develop and lead on the implementation of strategic soil management initiatives and projects.
- Develop soil restoration management plans.
- Monitor soil condition and initiates management responses.

**Are called upon to:**
- Advise in the development of national policy and strategy for soils protection.
- Assist in the establishment of soil health monitoring indicators at national level.
- Engage and advise on reviews into soil protection and the development of new codes of practice.
- Advise and mentor others on soil health and the tools and techniques of soils management and restoration.

<tr>
<td>Visualisation and photography</td>
<td>Selection and use of camera equipment for the generation of visualisations.</td>
<td>Demonstrates an understanding of the need to the full range of camera equipment that can be used by landscape professionals. Demonstrates an understanding of what different visualisation tools are available, in terms of computer software and the ability to undertake camera image model render mapping accurately.</td>
<td>Contributes to the delivery of visualisation projects through use of camera equipment, survey knowledge and visualisation software. Is able to identify the most appropriate techniques for the delivery of a project.</td>
<td>Employs appropriate camera equipment, survey knowledge and visualisation software. Is able to identify the most appropriate techniques for the delivery of a project and understand the consequences of not using the correct equipment.</td>
<td>Is an authority on camera equipment, survey knowledge and visualisation software. Capable of providing Expert Witness evidence at Public Inquiry.</td>
</tr>
</tbody>
</table>

To be competent you will need to demonstrate that in relation to your landscape specialism you:

Understand:
- Basic principles of camera equipment, including manual settings, lenses, the use of levelled tripod
- Full understanding of geographic projection systems and survey equipment
- The range of software appropriate for generating visualisations
- Scope of what is required
- Different pieces of camera equipment
- The hardware requirements and accuracy issues for capturing accurate locational data (GNSS/RTK)
- Why locational accuracy is critical
- Ordnance Survey OSGB36 National Grid projection
- The range of software options available for generation of accurate visualisations
- LI Technical Guidance Note

Can:
- Write a specification for a photographer to undertake technical photography for a project or contribute towards using camera equipment to take photographs
- Identify what survey information is required to generate accurate visualisations and prepare a brief for the surveyors
- Deliver visualisation services in accordance with LI Technical Guidance Note
- Use the software to construct accurate 3D models of development proposals

Can:
- Use camera equipment for gathering photography
- Apply detailed technical understanding of the equipment
- Use camera equipment to take technical photography suitable for matching with 3D model renders
- Generate visualisation which correctly remap 3D model views to photographic images in support of LVAs, LVIs and for Public Inquiries/Appeals

Are called upon to:
- Run CPD on technical photography
- Help develop technical guidance within organisation and with the LI
- Give expert witness at Public Inquiry
- Develop technical guidance within organisation and with the LI

<tr>
<td>Water management</td>
<td>Prioritises all elements of the water cycle using the principles of Water Sensitive Urban Design (WSUD). Plans, designs and/or manages landscapes that integrate Sustainable Urban Drainage Systems (SuDS) and reduce the risk of flooding. Uses principles of natural drainage to absorb or attenuate water into permeable and vegetated surfaces to better manage the flows of water.</td>
<td>Demonstrates understanding of the concept of the natural water cycle and the issues of urbanisation that effect it.</td>
<td>Contribute to analysis of the landscape and drainage issues and opportunities. Understand the role of other professions in the WSuD, where a Landscape Architect has responsibility and where they should seek advice. Design basic SuDS with the support of a more senior colleague.</td>
<td>Leads projects incorporating SuDS either as design lead or in support of another professional. Advises on commission of appropriate consultants and surveys.</td>
<td>Is a recognised authority on WSuD and SuDS with a track record of delivering high profile projects or in special situations.</td>
</tr>
</tbody>
</table>

To be competent you will need to demonstrate that in relation to your landscape specialism you:

**Understand:**
- The water cycle and the impact of urbanisation on it
- Benefits of WSUD
- The concept of rainfall return periods
- Concepts of attenuation
- Implications of ground permeability, risks for ground pollution and Groundwater Source Protection Zones
- Legislation and governance framework
- Adoption and maintenance issues
- Difference between storm, combined and foul sewers
- Delivering multiple benefits, based on the ‘four pillars of SuDS’: water quantity; water quality; amenity; biodiversity
- Retrofitting opportunities
- SuDS Management Train
- Catchment management effects and opportunities
- Implications of restricting SuDS to ‘end of pipe solutions’ on landscape
- The main components of a SuDS
- Where to look for guidance

**Can:**
- Understand the roles and responsibilities of the different professionals in WSUD
- Understand the role of the Landscape Architect in WSUD and when do they need to ask for advice from others
- Design a simple SuDS project under the supervision of a senior colleague ensuring management and maintenance processes are understood and accommodated in the design
- Coordinate input from other professionals when leading a simple project or input to a team supporting on a more complex project
- Understand which baseline surveys are required, which a Landscape Architect is responsible for and undertake these
- Attend and contribute to project meetings
- Attend and contribute to stakeholder workshops and public consultations
- Advise on and produce layouts

**Can:**
- Lead projects incorporating SuDS
- Lead project meetings
- Produce best practice SuDS Designs
- Commission or advise on the commission of sub-consultants and surveys
- Devise engagement strategies
- Understand timescale and produce programmes
- Set out management and maintenance plans including clear responsibilities and funding proposals

**Are called upon to:**
- Provide expert advice to others on WSuD and SuDS
- Train and develop others in WSuD and SuDS
- Speak at conferences
- Advise industry bodies (or similar)
